

PROTECTION AND PROACTIVE  
CONSERVATION OF CORAL  
REEFS USING AI ALGORITHM

Eco  Mode

**MOL Mauritius  
International Fund**

for Natural Environment Recovery and Sustainability

# Introduction

- ▶ Coral reefs are one of the most diverse and valuable ecosystems on the planet, providing habitats for numerous marine species, protecting coastlines from erosion, and supporting important fisheries and tourism industries. However, these delicate ecosystems are under threat from a variety of factors including climate change, pollution, overfishing, and habitat destruction. In recent years, coral farming has emerged as a potential solution to help mitigate these threats and support the restoration and conservation of coral reefs.

# MV Wakashio

- ▶ **25<sup>th</sup> July 2020**- grounding of the vessel off Pointe D'Esny in the south-east coast of Mauritius.
- ▶ **26<sup>th</sup> July 2020**- The Government activated the National Oil Spill Contingency Plan.
- ▶ **5<sup>th</sup> August 2020**- minor oil sheen was spotted around the vessel.
- ▶ **6<sup>th</sup> August 2020**- MV Wakashio flooded and started sinking, spilling oil at a high rate. An estimated 1000 tonnes had leaked from the ship prompting the Government to declare an Environmental State of Emergency. The coral ecosystems were badly affected.

# EcoMode Society

- ▶ The EcoMode Society (EMS) is an NGO working to preserve our environment be it terrestrial or marine. As the name suggests, the team supports eco-friendly lifestyles through implementation of national programmes dealing with Solid Waste Management, Protection of Marine Ecosystem and Biodiversity, Resource Management, Resource Conservation and Public Awareness Campaigns.

Coral Farming  
Team

➤ Construction of coral nurseries

# On site welding and measurement of ropes to fix corals

- ▶ Broken coral colonies and fragments were collected from the Wakashio site.
- ▶ The broken corals were then taken to the nursery site at Pointe Aux Feuilles.

- ▶ The fragmented corals were then twisted onto the ropes.

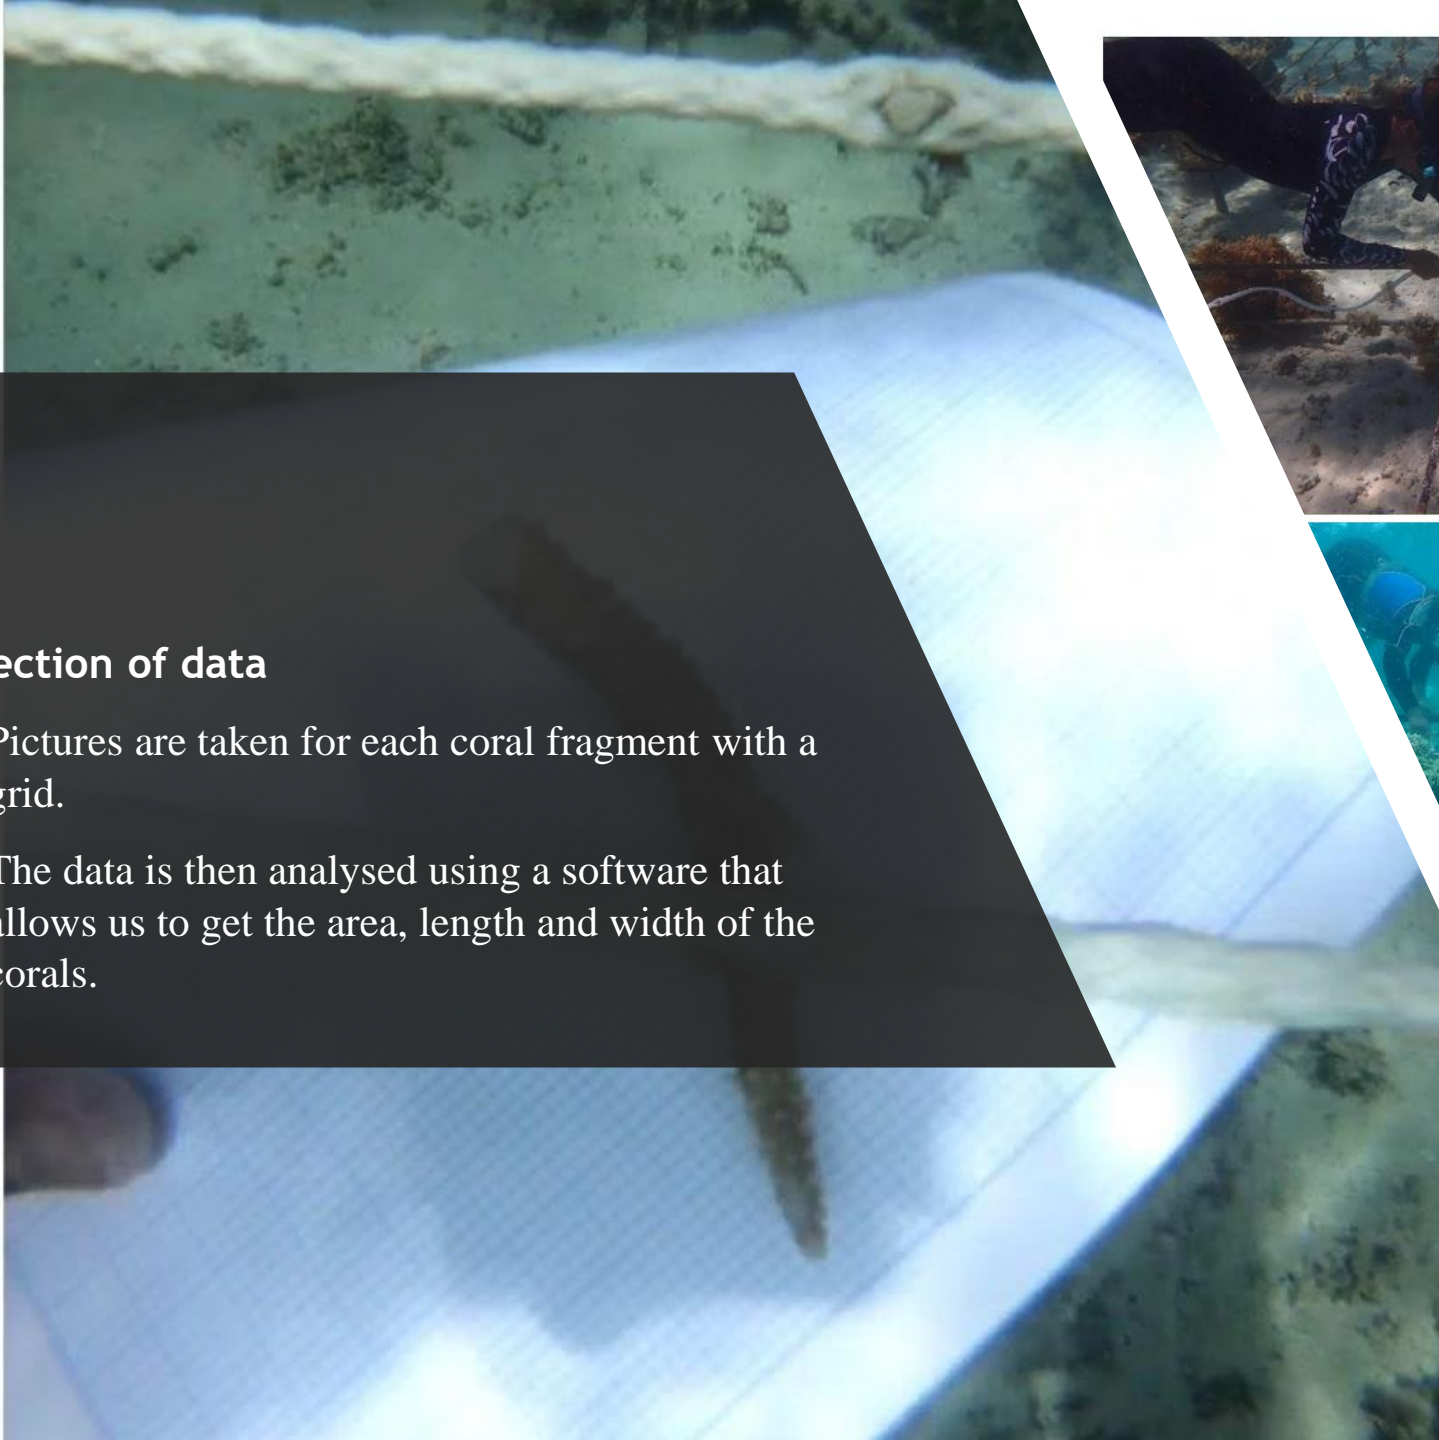

- ▶ The ropes were then attached to each end of the tables and fixed with a temporary cable ties.

## Collection of data

- ▶ Pictures are taken for each coral fragment with a grid.
- ▶ The data is then analysed using a software that allows us to get the area, length and width of the corals.

# Community Involvement

- ▶ Ocean literacy is the bedrock of ocean action.
- ▶ Knowledge being the key to restore the ocean, through this project there was dissemination of information by scientists working on the project. There is a difference between what scientists know and what the general public knows. Local stakeholders will feel more concerned and integrated in ocean restoration if there is passing of information from grassroot level to global level.

# Training of Local Fishermen

# Training of Local Fishermen

# AI Algorithm

Rope guide

- ▶ The AI Algorithm was developed to allow maximum coral growth rates calculation and to save time from conventional assessment of coral growth rates.
- ▶ A black A4 board with a yellow dot or a 10 Rupees coin was used to acquire data underwater directly using diving/snorkeling techniques. Given that we were using the ropes techniques, the board was modified to allow the direction of a line in middle. EMS teams would dive/snorkel and take pictures with the black board underneath.

AI Data collection

# Genetics analysis at UOM Laboratory

- ▶ The aim of this study is to compare the genetic diversity of same coral species that are found in the underwater nursery with those found in its surrounding region, located in the lagoon of Mauritius island.

# Community Involvement, training, women empowerment and Sensitisation with Children

# Online training with Children on Marine Biodiversity including much emphasis on coral reefs.

The screenshot displays the Facebook profile of EcoMode Society. The left sidebar includes navigation options: 'Manage Pages and profiles', 'Meta Business Suite' (with sub-items: Inbox, Planner, Publishing tools, Insights, News Feed, Business Apps), 'Home', and 'News Feed'. The main content area shows a post from EcoMode Society, published by Vri Shabh on June 1, 2022. The post features a collage of photos: two men holding certificates, an 'Earth Day' logo, and underwater coral reef images. The text of the post reads: 'Zoom meeting on Saturday 4th June at 13:00 about coral reefs. Message to parents: You and your children are invited to join the Coral Reef Lab this Saturday! This is a completely free, fun and interactive session for kids. You are encouraged to grab this opportunity and help us share knowledge about coral reefs.... See more'. Below the text is a large image of a vibrant coral reef with a video call overlay in the bottom right corner showing several children's faces.

THANK YOU

END
